## 2. Botanical terms and fern structure

## 2.1. Classification

Ferns are an ancient group of the Plant Kingdom, in the Division Pteridophyta. For further classification information visit Landcare's website.

## 2.2. Fern structure

Below are two different fern species, labelled to show appropriate terminology.

The reproductive structures of ferns may be seen as a whole fertile frond, or seen in distinctive clusters, called sori, on the undersides of the fronds. Below, the magnified portions of two very different species show distinct arrangements of sori.
